Duplex alignment test. Print this page 2-sided at **Actual size (100%)** (not "Fit to page"), with the same paper and settings as your cards. Hold the sheet up to a light, this side facing you.

- Each cross sits on the rings of the **same number**: your printer flips on the long edge. Use the **Long-edge** files.
- You see **12 behind 1** (the numbers reversed, the back upside down): it flips on the short edge. Use the **Short-edge** file, or set the printer to "flip on long edge".
- Crosses a little off the middle: that's your printer's own shift (each ring is 1/16 in). The pale edge on card backs hides shifts up to 1/8 in.
